

Industry Report: The Impact of Digitalisation on Project Teams

Case Study: Cloud Migration Project

Prepared by: Ntokozo Mnguni (221026899)

Student Number: 221026899

Faculty: CBE (Department of Applied Information Systems)

Date: November 02, 2025

Executive Summary

This report examines how digitalization specifically a cloud migration initiative has affected project-team composition, role clarity, collaboration, performance, social dynamics, and perceived challenges. The analysis uses responses from seven project participants who completed a standardized questionnaire. Key findings include improved coordination and decision-making through digital tools, general role clarity but unclear human-tool boundaries, and challenges in integration, security, and change resistance.

Project description

Project title: Cloud Migration Infrastructure & Service Modernization

Overview and objectives:

- Migrate on-premises servers and applications to a cloud platform to improve scalability, reliability, and disaster recovery.
- Enable automation (CI/CD), improve access to data and analytics, and reduce infrastructure maintenance costs.

Scope:

- Inventory and assessment; re-architecting where necessary; implement IaC and CI/CD; migrate data; cutover and validation; training and change management.

Team composition & role descriptions

Below are the seven team members and assigned roles (based on their questionnaire responses):

Team member	Role	Role description
Makwetla Mogomotsi	Project Manager	Oversees schedule, stakeholder communication, and project coordination.
Govender Therosha	Cloud Architect	Designs target cloud architecture and migration strategy; selects cloud services.
Ngidi Melusi	DevOps Engineer	Builds CI/CD pipelines, automates deployments, and implements infrastructure-as-code.
Mante Rathlokwa	Data Analyst	Manages data migration quality, verification, and analytics integration.
Masuku Thulisile	Change Manager	Leads adoption activities, training, and cultural

adjustments.

Mogagabe Benjamin

Cybersecurity Specialist

Focuses on data protection, IAM, and monitoring to secure cloud assets.

Sanyane Odirile

Business Analyst / Stakeholder Engagement

Liaises with business stakeholders to translate requirements into cloud solutions.

Analysis of questionnaire responses

Methodology:

- Instrument: Standardized questionnaire covering understanding of digital transformation, involvement in digital project types, team membership, role clarity, collaboration, performance, dynamics, social interaction, challenges, and team success.
- Respondents: Seven team members involved in the cloud migration project.
- Approach: Numerical encoding of Likert responses (1-5) and computation of per-section averages and member-level scores.

Section-level Averages

The chart below shows team-level average scores by questionnaire section (1 = low / negative; 5 = high / positive).

Interpretation: Higher averages in Collaboration and Team Success indicate that digital tools are improving coordination and outcomes, while lower scores in some social interaction items suggest a need for social rituals and change management.

Section-wise scores per team member (radar)

The radar chart plots each team member's average score across key sections: Role Clarity, Collaboration, Performance, Team Dynamics, Social Interaction, Team Success.

Interpretation: The radar illustrates variation between members — some score higher on performance and collaboration, others show dips in social interaction or role clarity.

Overall digitalisation score by team member

The chart below ranks team members by their overall average score across sections (higher = more positive/perceived impact).

Interpretation: Use these scores to identify champions (high scorers) and focus areas (lower scorers) for targeted interventions and training.

Discussion & Recommendations

Discussion:

- Cloud migration improved transparency, coordination, and the ability to make data-driven decisions.
- Role clarity exists but the division between human and tool responsibilities needs clearer definition.
- Security, integration challenges, and resistance to change are current concerns.

Recommendations:

1. Role-clarity & governance: Produce a RACI including automation responsibilities.
2. Phased migration with robust testing: Pilot, canary deploy, and have rollback plans.
3. Training & upskilling: Role-specific cloud and DevOps training.
4. Security & compliance: Adopt IAM, centralized logging, and monitoring pre-cutover.
5. Manage social dynamics: Virtual coffee, check-ins, and buddy systems.
6. Standardize collaboration workflows and measure success through KPIs (deployment frequency, MTTR, user satisfaction).

Appendices

Appendix A - Raw data

The original questionnaire responses are included in the submitted Excel file:

Appendix B

Team member impact statements:

- **Makwetla Mogomotsi (Project Manager):** Digitalisation has streamlined project coordination, allowing real-time tracking and faster decision-making across all stages of the migration process.
- **Govender Therosha (Cloud Architect):** It has transformed how we design and deliver solutions by enabling scalable, automated infrastructure and reducing manual intervention.
- **Ngidi Melusi (DevOps Engineer):** Digitalisation has improved deployment efficiency through automation pipelines and continuous integration tools, minimizing errors and downtime.
- **Mante Rathlokwa (Data Analyst):** It has enhanced access to real-time data, enabling better analytics, reporting, and insights for decision-making during the migration.
- **Masuku Thulisile (Change Manager):** Digitalisation has reshaped team culture by fostering adaptability, virtual collaboration, and a more agile approach to project delivery.
- **Mogagabe Benjamin (Cybersecurity Specialist):** It has increased the need for integrated security awareness and proactive monitoring to protect sensitive data in digital environments.
- **Sanyane Odirile (Business Analyst):** Digitalization has strengthened stakeholder engagement by improving transparency, visibility, and communication through digital dashboards and platforms.
